Your Floor Covering and Furniture Specialists

GEORGE OZUNA, JR. LIBRARY, Palo Alto College

LIBRARY MOBILIZATION SYSTEM

GFC, Inc. uses a unique pneumatic system—the Universal Lift System—to move large, heavy bookshelves for flooring installation or library re-organization.

The Universal Lift System uses compressed air and a wheel and rack system to raise the full shelves and move them safely and quietly to a nearby location until the new flooring is installed. The Universal Lift System is even quiet enough to allow the library to remain open during the process.

PROJECT CHALLENGES

The library's original nine-year-old carpet had been troublesome from the beginning. Carpet seams were lifting and the administration suspected moisture in the building might be responsible.

After a long delay to investigate the problem and to find the perfect new carpet—in the end they chose a custom design to match existing imported floor tiles—Gomez had only a month to complete the job before fiscal year-end.

PROJECT RESULTS

The custom carpet was produced and delivered by C&A in a month and GFC installed it in a record time of 10 days. The library stayed open during the entire process and the client was very happy with the finished space.

UNIVERSAL LIFT SYSTEM

TESTIMONIALS

"This client required bidding companies to use a lift system to raise the stacks in order to be considered for the project. With Gomez's long record of experience and success with the Universal Lift System, we knew we had an edge on our competitors".

ReDonna Mendez, RID, Project Manager
